Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-28, drawn to a device for joining at least two structural features having a relative mobility, classified in class 403, subclass 220+.
 - II. Claims 29-31, drawn to an x-ray apparatus, classified in class 378, subclass 193+.

The inventions are distinct, each from the other because of the following reasons:

Inventions of groups II and I are related as combination and subcombination, respectively.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination of group II does not require the particulars of the subcombination of group I because in the combination of group II, the hollow flexible element merely has to **surround** the means for connecting whereas in the subcombination of group I the hollow flexible element **encloses** the means for connecting. The subcombination of group I has separate utility such as a flexible cover for connecting the ends of spaced apart wiring ducts.

2. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 3679

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
